

## What you need to know about Encanvas Agile

- Bridge between IT and the business allowing designers to author applications in workshops
- Create new apps using point-and-click applications and ready-made building blocks
- Use data mashups to acquire data from across the enterprise and from the Web
- It means up to 80% of the coding overhead is taken care of
- Patent-pending Version-Rollback technology means release versioning isn't necessary
- Encanvas permits the massive scaling of your portal architecture – and it's very secure!

## Middle-Apps

- Squork - Secure and live online web-chat and business social networking
- Webshow360 – Live web presentations
- Secure Transfer – FTP file transfer replacement
- Vector-Map-Format (VMF) - Geo-spatial data management
- DynamicZoom – Data visualization
- S-Tag semantic content management
- Social Graph – Social network graphing
- Information Flow Designer – Machine automated events

# Encanvas Agile

Create rich enterprise applications that stand out

IN BREIF

Encanvas Agile™ is See-No-Code™ applications design software that enables software designers to create situational or enterprise scalable business applications right-first-time to securely extend networks and processes beyond the enterprise without deep technical skills. Once designed, solutions are instantly uploaded directly to Microsoft™ Azure® for instant deployment.

Encanvas addresses the long-tail of demand for business applications by providing point-and-click authoring of secure portal workspaces and mobile applications that enable customers, partners and colleagues to work together, capture data and share insights. It supports a structured yet agile method of software development that promotes development iterations, open collaboration, and adaptability throughout the life-cycle of development. Stakeholders can change requirements and learn through to design process without compromising the outcome giving stakeholders precisely the information systems they need. Formal methods of agile development including SCRUM and Test Driven Development supported by a closely coupled point-and-click design suite that includes close integration with Encanvas DataConnect™ dynamic data source connectivity.

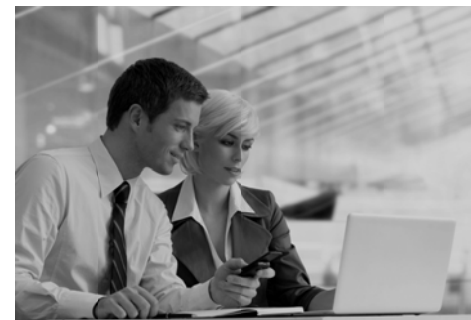

The Encanvas Secure&Live™ architecture includes ready-to-use Middle-App™ building block technologies that dramatically cut programming overheads. Its massively scaling portal architecture offers the lowest operational support overhead of any enterprise portal solution.

Cloud deployment (cross-browser)

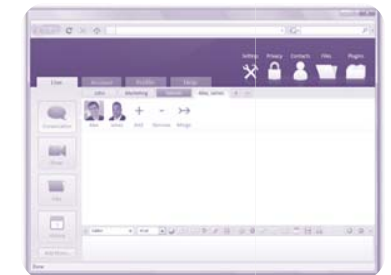

Workshop point-and-click design

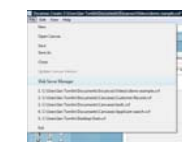

Data from across the enterprise

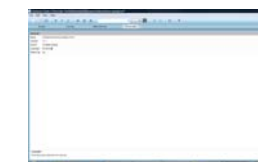

Simple publishing

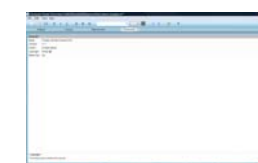

8. Start working!

7. Publish

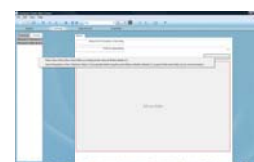

6. Configure Web Server

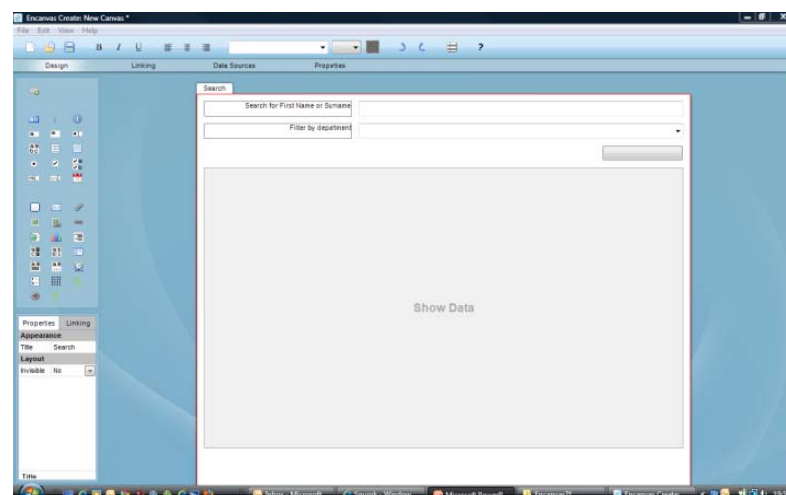

5. Set properties

4. Data mashups

3. Logic relationships

2. DESIGN the User Interface with point-and-click elements

1. Select canvas type
