IN BRIEF

Enterprise Business Intelligence software is costly to adapt, often concentrates on answering questions already known, and only supports a fraction of the user base. In contrast, Encanvas BusinessIntel™ embeds functions like dashboards, charts, data visualization, alert notifications and reports into collaborative web spaces deployed on the Microsoft™ Azure® cloud or to on-premises Web server platforms. Its adaptive architecture means applications grow to meet emerging demands for insights. Integral data mashup capabilities provide federated views of data from anywhere giving decision makers new perspectives on performance and activities.

An effective business intelligence strategy serves the majority of decision makers at all levels of the enterprise for operational and situational needs. Encanvas integrates with Microsoft SQL Server™ 2008; a business intelligence platform that cascades reporting and performance monitoring across the enterprise. Encanvas BusinessIntel™ helps decision makers make sense of what they don't already know. What's more, it's cross-browser compatible and built on Microsoft® ASP.NET for peace of mind.

Dashboards that change as fast as your business environment

Business intelligence mashups federate disparate data from across the enterprise and beyond

Online access to business activity analytics from anywhere and enjoy mobile alerts

Collaborative business intelligence can be integrated into the social office workspace

Executive alerts and scorecard dashboards

Extend with Encanvas geo-spatial intelligence applications
