

What you need to know about Encanvas Maps™

- There's no need to employ specialist in-house IT or geo-spatial mapping resources. With Encanvas Maps™ you can adapt and create new geo-spatial applications without employing specialist IT programming or cartographic skills.
- Realize the benefits of *always-on working* by giving everyone in the enterprise access to location-based capture, analysis and visualization. Embed geo-spatial capture, analysis and presentation into secure portal and mobile applications deployed on your on premises web server or Microsoft® Azure® without coding or scripting.
- Create new data mashup views and present your data from anywhere geo-spatially so you can add mapping to business applications without advertising, complex contractual terms etc.
- Work with maps of your choice—Googlemaps™, Bing Maps™, legacy GIS maps, DWG etc.

Business benefits

- Share geo-spatial data from across your enterprise
- Engage with external partners to share information
- Affordable, instantly accessible web portal and mobile mapping
- Designed for small to medium-sized and government organizations
- Easy to learn and use for permanent and temporary workers
- Secure access 24x7 for flexi-staff and remote workers

Encanvas Maps

Know where.

IN BRIEF

Encanvas Maps™ make sense of business data with a location context but until now there hasn't been an affordable and accessible application the majority of businesses could use to exploit it. Mapping applications generally fall into two categories; the sort of applications you find on the web that are easy to use but aren't really suited for business, and 'expert' tools designed for cartographers and IT experts that are expensive to buy, difficult to integrate and require specialists to use. Encanvas Maps™ makes it easy to capture, analyze and present map data from any source. And because it's part of Encanvas Secure&Live™, your enterprise can enjoy professional business geo-spatial mapping for everyone—anywhere, anytime.

Your business world on maps

Step 1.

Select your data sources

Microsoft®

ORACLE®

IBM®

MySQL®

SAP®

Step 2.

Pick a map source

Google Maps®
