

What you need to know about Encanvas Mashups

- Use point-and-click design tools to create ubiquitous mashup applications that consume information sources from across the enterprise and then publish instantly to Microsoft™ Azure® (or your Web hosting service of choice) without needing deep IT skills
- Unique built-in integrations architecture facilitates data acquisition from multiple sources
- Integrate new portal solutions easily with existing data sources and applications
- Combine services with connectors that include ODBC, REST, RSS, directory services, CRM, data views, list services and integrate with enterprise portals and SharePoint™
- Publish Microsoft® Excel™ spreadsheets-as-a-service (or set of services)
- Patent-pending Version-Rollback™ technology means release versioning isn't necessary
- Respect integration and security protocols (WS-SEC, Mutual SSL, PKI, LDAP etc.)

IN BRIEF

Create applications that harvest data from across and beyond the enterprise without deep technical skills and upload them directly to Microsoft™ Azure® (or your preferred Web hosting platform) for instant deployment.

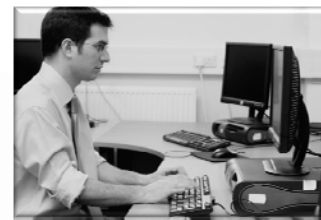

Enterprise mashups address the long-tail of demand for business applications by providing point-and-click authoring of secure portal workspaces and mobile applications that enable customers, partners and colleagues to consume information services in new ways to work together, capture data and share insights. For additional functionality upgrade to Encanvas Agile™ for more ready-to-use Middle-Apps™ designed specifically for business users who expect the highest standards of security, scalability and operational continuity. Encanvas enables IT teams to massively scale their portal architectures while offering the lowest operational support overhead of any enterprise solution.

So what will you build?

- Charts and Reports
- Maps
- Pictures
- Search
- Dashboards
- Forms and Buttons
- Links
- Tables
